

# 3 POINT SUSPENSION

## Special Points of Interest:

**Diffuser appears to look inflated when system is off.**

**Can be used with cable or rail**

## NEW SLEEK LOOK

This option combines a simple one row cable suspension or single HD rail with hangers to keep the FlowCon diffuser looking inflated without airflow. Limited to 12"-48" diameter, this option is perfect for applications with fittings, as the only change required is the radius of the hanger. Components include standard one row tension cable or our HD single rail system. Besides the 3 Point Hangers (aluminum), other components are available in galvanized or 316 stainless steel.

*Hangers are available in the option of:*

*3:00, 12:00 and 9:00 OR 2:00, 12:00 and 10:00*
